

1
2 **ABSTRACT**

3 With at least one implementation described herein, one or more viewers are
4 able to watch the same source multimedia content at multiple locations within an
5 environment (e.g., a household). With at least one implementation described
6 herein, a viewer is able to resume watching such content at a new location (or
7 “locus”) from the point that she bookmarked the content at an original location.
8 This abstract itself is not intended to limit the scope of this patent. The scope of
9 the present invention is pointed out in the appending claims.
